A global learning forum for sustainable development

The overall goal of GCUA 2030 is to enhance the capacity of its partners to contribute to Agenda 2030 and the Sustainable Development Goals (SDGs) through international collaboration.

A key objective is to equip the next generation of researchers, teachers and academic leaders with knowledge, tools and networks that will strengthen their capacity to work across disciplines and to conduct translational research.

Activities

The network offers different types of learning activities designed to accommodate and be attractive to students from different educational systems.
