

Seminar - 25<sup>th</sup> September

# Liveable cities and urban nature

As cities all over the world grow and attract more people, the natural environment is increasingly under pressure. It is a global goal for the UN and the EU to stop the decline in biodiversity by 2020 at the latest. The fulfilment of that goal can be helped by a strengthened focus on urban nature and the blue-green infrastructure.

The 25<sup>th</sup> September **Ramboll** and **SLU Urban Futures** welcomes everyone who wants to take part and learn more on how we can reshape our planning and policies to promote urban nature to an evening seminar in central Uppsala.

We will meet, mingle and talk on how we can engage in and mobilise urban nature in order to increase wellbeing and quality of life and create liveable cities.
