

About the WaterGUIDE tool for Nutrient loss mitigation

This decision support tool was developed by the Swedish University of Agricultural Sciences (SLU) within work packages 3 and 4 in the Interreg Baltic Sea Region Programme project Waterdrive in collaboration with a number of project partners.

Read more about Waterdrive, and WP3 and WP4 here: <https://water-drive.eu/about/>

Please note: This tool is not intended for public use, it is supposed to be used within the project by persons well acquainted with local field conditions and the information provided. Changes of the tool can be made at any time. All users of the tool are solely responsible for any decisions made. The information presented is not guaranteed to be error free, and in most cases it was generated in a more general scale than the field level. The tool shall be regarded as working material, which provides information for discussion that exemplifies how various types of data related to nutrient loss from arable land can be presented to users (e.g. farmers, advisors and authorities) at the field scale, or even within-field scale. All numbers of costs and payments mentioned are only examples in the system, and should be used only for testing the system.
