

# WaterGUIDE Dashboard

Overview of data used in WaterGUIDE.online  
 Example from the Roxen case study area

[https://bit.ly/waterguide\\_dashboard](https://bit.ly/waterguide_dashboard)

WaterGUIDE Dashboard is an example of how detailed data on mitigation measures for reduction of nutrient loss can be visualized on the regional level. Zoom in and move around the map, and see the average effects of catch crops and structural liming on N and P reduction. Please note that these effects are modelled values which depends on a range of conditions and assumptions.

The data originate from the [WaterGUIDE.online](https://bit.ly/waterguide_online) tool, a prototype web application developed within the Waterdrive project. It is a decision support tool aimed for use at the field level of arable land. However, it is not possible to get an overview of the data in WaterGUIDE.online.

For info on the data and references see: [https://bit.ly/waterguide\\_manual](https://bit.ly/waterguide_manual)
