14	National Inventory of Landscapes in Sweden
14	Terrestrial Habitat Monitoring
14	Butterfly and Bumblebee Inventory
14	Forest Sustainability Analysis
15	Field Staff

It is now time to report on the Department's activities as the Earth has once again rotated one revolution in its elliptical orbit around the sun. It is a journey that takes about 365 days at a speed of more than 100,000 kilometers per hour! During this journey, a lot of exciting activities have happened at the Department in teaching, research and environmental monitoring and assessment that need to be highlighted. In comparison with previous years' annual reports, the format has changed slightly this year. The annual report has been slimmed down somewhat to instead report current research projects, etc., to a greater extent on our website. In this way, we hope that the information about the Department's activities can reach out to more readers.

This annual report is divided into the main fields of activities of the Department: Undergraduate, Master's and Doctoral studies, and research within five subject areas as well as five environmental monitoring and assessment programs. Also included in this report are the schematic view of the Department's organization, facts and figures, followed by a compilation of names of the field staff.

The most important event during the year must be considered the evaluation of Quality and Impact 2018 (KoN – Kvalitet och Nytt 2018), which aimed to highlight SLU's and the Departments' strengths as well as to suggest actions for improvement regarding research. The process started up in 2017, with the whole Department as a single Unit of Assessment (UoA), and the first part consisted of a self-evaluation divided into four sections: quality of research, societal impact of research, capacity for collaboration with society, and facts and figures about the UoA. This part was completed by the end of February. Secondly, a group chosen to represent the Department met a review panel for an interview at Ultuna on 30 May. Our UoA was to be evaluated within the panel of Forest Management consisting of eight experts within the research field. Finally, we received the expert panel's overall assessment report in June, where the Department consistently received top marks – 24 out of 27 credits! We were, thereby, ranked highest in Forest Management and also among the highest ranked UoAs at SLU as a whole. Thank you all for your excellent contributions throughout the years!!! The final version of the panel reports were made available to all at SLU in August. Analyses were carried out during autumn and presented at the SLU Board meeting in December. In 2019, the Department will continue with a follow-up of the KoN 2018 evaluation, which will be reported to Dean Göran Ståhl.

All of the achievements of the Department are, of course, based on a combination of individual and team efforts, contributions that all definitely deserve to be mentioned. This is unfortunately an impossible task. Nevertheless, I would like to highlight a few important events with respect to the staff during 2018:

- Karin Öhman was employed as Faculty Professor in Forest Planning
- Magnus Ekström was employed as Guest Professor in Mathematical Statistics Applied to Forest Sciences
- Elias Andersson was employed as Associate Senior Lecturer in Landscape Studies and Svetlana Saarela was employed as Associate Senior Lecturer in Forest Inventory and Sampling
- Osmo Mattila was employed as Postdoctoral Researcher
- Mattias Danielsson, Alex Appiah Mensah, Wilmer Prentius and Ulrika Roos were employed as Doctoral Students
- Andreas Press was employed as Research Engineer
- Åsa Ranlund and Cornelia Roberge were employed as Environmental Assessment Specialists
- Maria Spencer was employed as Economy Officer and Veronika Bredberg and Sofia Sjögren were employed as Human Resources Administrators
- Pär Andersson was employed as Head of Administration
- Henrik Hedenås was appointed as Program Manager for the NILS program
- Jonas Bohlin was appointed as Vice Head and Director of Undergraduate and Master's Studies
- Mona Forsman and Lars Sängstuvall defended their theses successfully
- Per Sandström received the Faculty award for external collaboration for his excellent collaboration with the surrounding society
- Elias Andersson and Gun Lidestav et al. were awarded with the FALF prize for "International publication of the year 2017", for an article that increases the understanding of men's discursive resistance to equality measures in working life
- Neil Cory, Åsa Eriksson, Karin Nordkvist, Heather Reese, Marcus Strandberg and Marianne Åkerholm left for other duties
- Anne-Maj Jonsson, Göran Kempe, Anders Lundström, Bo-Gunnar Olsson, Maud Tyboni and Carina Westerlund retired after a long, deserving and loyal service
- Johan Bergstedt, Tomas Lämås and Håkan Olsson were honored in a special celebration for employees that have served the government for 30 years

I hope you will enjoy reading this annual report and do not hesitate to contact us if you would like to find out more about the activities touched upon here. We would be more than pleased to share our knowledge and experiences with you!

Yours sincerely,

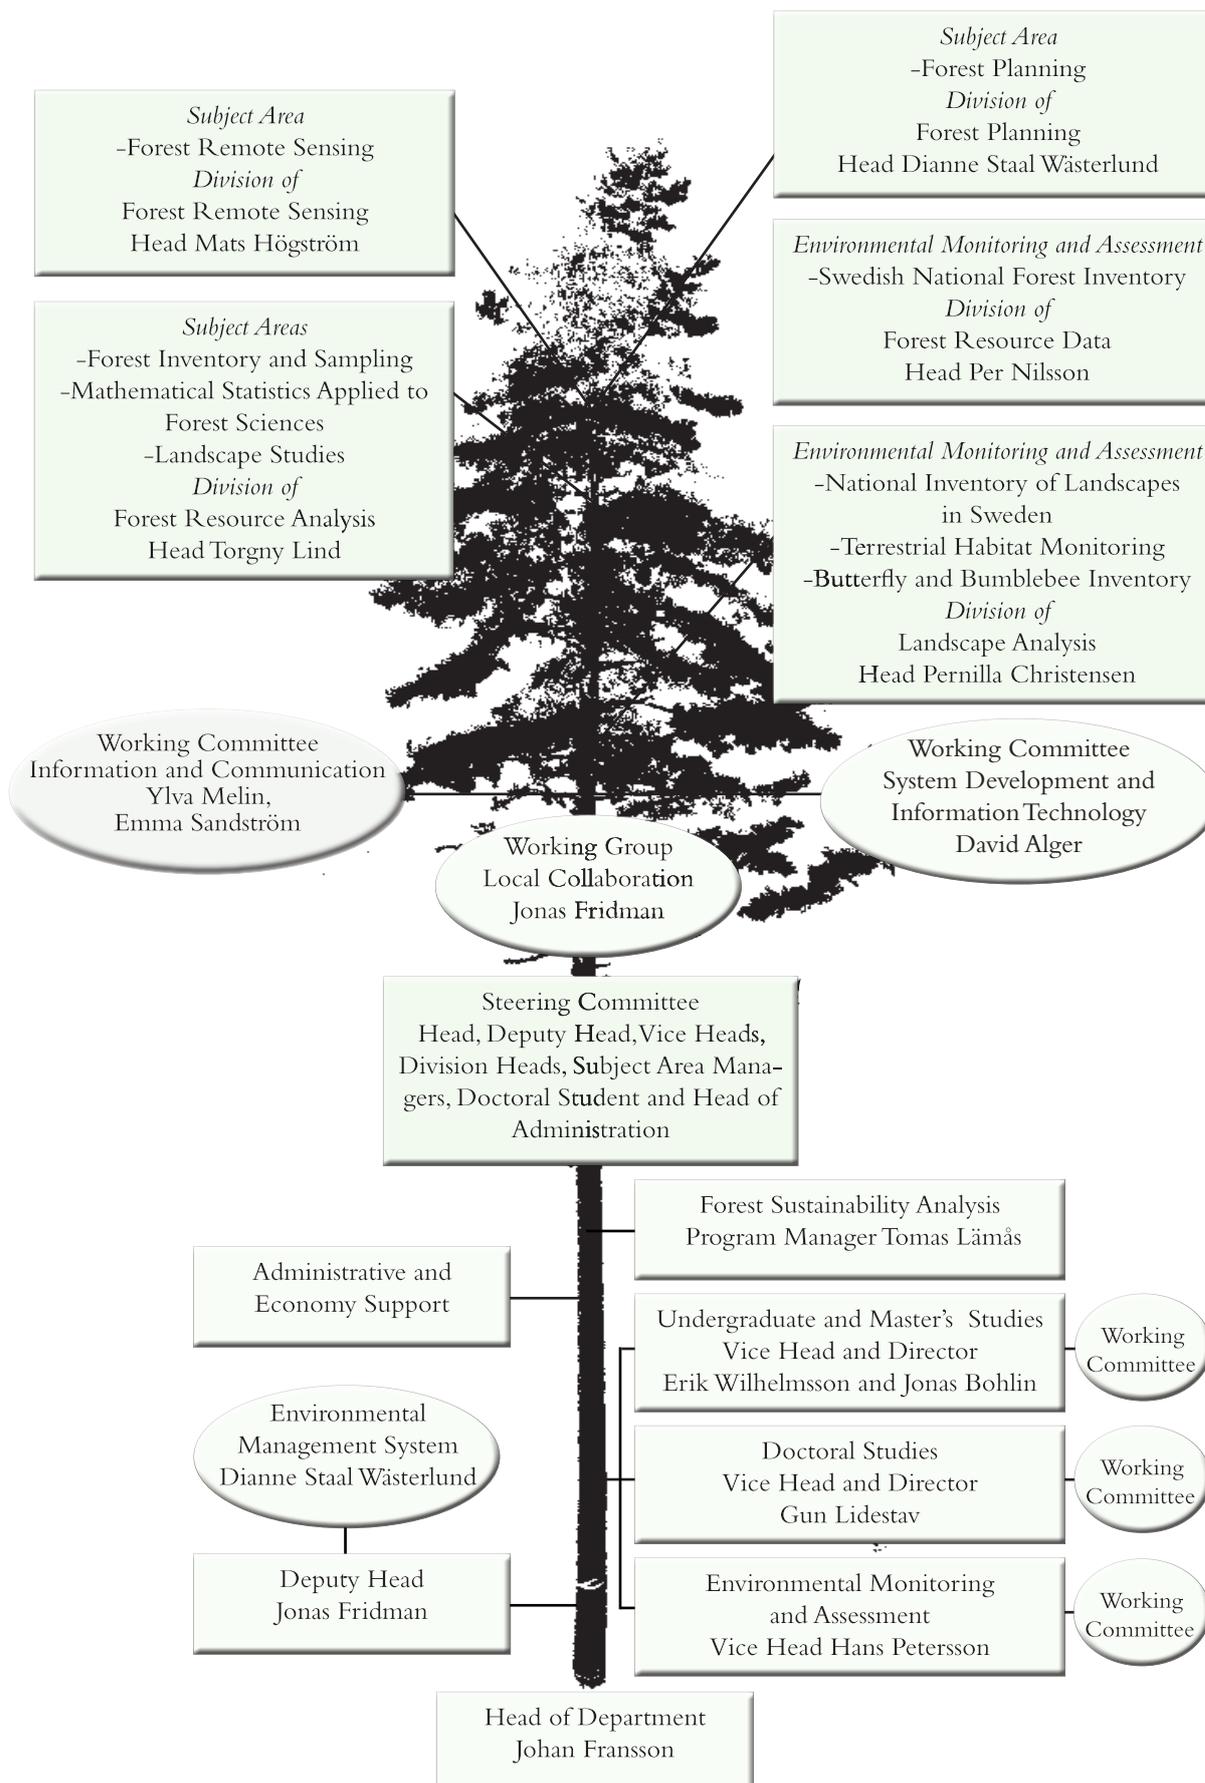

Johan Fransson  
Head of Department

# Undergraduate and Master's Studies

Vice Head and Director  
Undergraduate and  
Master's Studies  
Erik Wilhelmsson and  
Jonas Bohlin

The Department is a major contributor to SLU's Master of Forestry Program (Jägmästarprogrammet). Our course selection amounts to about 40 ECTS credits at Undergraduate level and 45 ECTS credits at Master's level. The courses are given in the following five subjects: Remote Sensing and Geographic Information Technology (GIT), Forest Inventory, Forest Planning, Mathematical Statistics and Organization and Leadership. The individual courses for each subject are shown in the table below, divided into Undergraduate and Master's level.

## Master's Theses

### Remote Sensing

Ellingson, Anders, 2018. Field- and aerial image estimation of residual timber volumes in Medelpad after the storms of the 2010s. Supervisor: Jörgen Wallerman.

Jansson, Carl, 2018. Identification of uneven-aged stands using photogrammetry and airborne laser scanning. Supervisor: Eva Lindberg.

Larsson, Helene, 2018. Classification of ground lichen using Sentinel-2 and airborne laser data. Supervisor: Heather Reese.

Persson, Magnus, 2018. Tree species classification using multi-temporal Sentinel-2 data. Supervisors: Heather Reese and Eva Lindberg.

Wennerlund, Lisa, 2018. Evaluating the need of cleaning using 3D point clouds derived from high resolution images collected with a drone. Supervisors: Jonas Bohlin and Jonas Jonzén.

### Forest Planning

Andreasson, Elin, 2018. Development and test of a supplier portfolio method for industrial wood supply. Supervisor: Ola Eriksson.

Brämshgården, Malin, 2018. Which forestry variables at the real estate level are most related to the wood yield value of forest properties in northern Sweden? Supervisor: Erik Wilhelmsson.

Bäckström, Hanna, 2018. The forest owners' ability to practice an alternative forestry in the county of Jämtland. Supervisor: Gun Lidestav.

Fjellgren Walkepää, Anja, 2018. The Swedish Forest Agency's handling of reindeer husbandry issues: An evaluation of knowledge, governance and regulations. Supervisor: Elias Andersson.

### Mathematical Statistics

Svensson, Arvid, 2018. Classifying forest stands according to spatial species mingling. Supervisor: Arne Pommerening.

### Organization and Leadership

Leifsdotter, Teresa, 2018. Leading by coaching: An evaluation of leadership training and its implementation within Stora Enso Skog and Stora Enso Bioenergy. Supervisor: Dianne Staal Wåsterlund.

### Others

Larsson, Jonas, 2018. Analysis of the total logistics cost for various raw material supply strategies to Tunadals sawmill. Supervisor: Dimitris Athanassiadis.

Löfdahl, Amanda, 2018. They were very pleased and ate everything we put in front of them: A study of the female forestry cook and her life in the forest camp. Supervisor: Lars Östlund.

## Courses

Subject	Undergraduate Level (years 1-3) 40-80 students per course	Master's Level (years 4-5) 10-60 students per course
Remote Sensing and GIT, Forest Inventory and Mathematical Statistics	Basic GIT, 3 ECTS Introduction to Tree and Stand Measurement, 1 ECTS Measurement of Site Index, 1 ECTS Statistics and Forest Inventory, 15 ECTS Laser Scanning and Digital Photogrammetry in Forestry, 7.5 ECTS (given outside the Master's program)	Remote Sensing and Forest Inventory, 15 ECTS Advanced GIT, 7.5 ECTS
Forest Planning	Introduction to Forest Planning, 3.5 ECTS Forest Management Planning, 4 ECTS Forest Planning with PlanWise as Decision Support, 7.5 ECTS	Forest Sustainability Analysis, 7.5 ECTS
Organization and Leadership	Individual and Group Leadership, 0.3 ECTS	The Forestry from Organizational Theory Related Perspective, 15 ECTS

Text: Jonas Bohlin, SLU.  
Table: Ylva Jonsson, SLU.

# Doctoral Studies

Through course work, seminars and participation in research projects, the doctoral program trains students in how to develop and address questions within the research subjects of Forest Management and Products, Technology, Mathematical Statistics and Biology. Within these subjects the students are supported by a team of experienced supervisors and network of national and international expertise. The Department additionally offers the unique experience of collaborating with researchers actively involved in two major national monitoring programmes, i.e. the Swedish National Forest Inventory and the National Inventory of Landscapes in Sweden.

Vice Head and Director  
Doctoral Studies  
Gun Lidestav

## Doctorate - Forest Remote Sensing

Mona Forsman

Tree stem diameter estimation from terrestrial point clouds

Dissertation: October

Supervisor: Associate Professor Johan Holmgren

Assistant supervisors: Associate Professor Heather Reese, Associate Professor Kenneth Olofsson and Senior Lecturer (Associate Professor) Niclas Börlin

## Doctorate - Forest Planning

Lars Sängstuvall

Improved harvesting technology for thinning of small diameter stands

Dissertation: December

Supervisor: Associate Professor Tomas Lämås

Assistant supervisors: Senior Adviser Ola Eriksson and Professor Tomas Nordfjell

## Courses

Title	Credits	Participants	Responsible
Introduction to Survey Sampling	3.0 ECTS	19	Svetlana Saarela
Modelling of the Forest Landscape Dynamics With Help of an Advanced Decision Support System	3.0 ECTS	10	Karin Öhman
Remote Sensing and Forest Inventory	7.5 ECTS	1	Jonas Bohlin

Text: Gun Lidestav, SLU.  
Table: Ylva Jonsson, SLU.

# Forest Remote Sensing

Within Forest remote sensing, we work with research, education and development of remote sensing of forests and other terrestrial vegetation. We also help with the processing of remote sensing data within the framework of SLU's environmental monitoring and assessment. We usually utilise data from optical, laser or radar sensors. Traditionally, sensor platforms have included satellites, aircraft and small, unmanned aircraft vehicles (so-called UAVs or drones). Increasingly, we also use sensors placed on the ground or in vehicles, which depict trees from the side.

# Forest Inventory and Sampling

Forest inventory and sampling comprises general sampling theory, field-based forest and landscape inventory, and in relation to these activities modelling and development of inventory systems that utilize multiple data sources. Forest inventory currently includes a number of aspects relevant to sustainable forestry. In addition to data on trees and stands, information on biodiversity and greenhouse gas balances are included. The subject area contributes knowledge to a large number of applications within applied forestry and environmental monitoring and assessment.

Inci Çağlayan

Many of the staff also  
work in the Forest  
Sustainability Analysis  
program.

Forest planning shall provide expertise and analysis tools that can contribute to sustainable forestry for forest owners and other users, taking into account the economy, nature values and social values. Forest planning deals with planning issues from both a business perspective and from a stakeholder or community perspective. The focus of research on the forest enterprise deals basically with methods to translate owners' goals into a forest plan. The community perspective is above all represented by research on the forest landscape as a socio-ecological unit, where various stakeholders converge and work together to influence the landscape's development.

# Mathematical Statistics Applied to Forest Sciences

This subject area is concerned with research on mathematical and statistical methods for effectively describing and modelling characteristics and traits related to organisms and life processes that are part of forest ecosystems and forest landscapes. We carry out quantitative studies of forest management, forest ecology and of other aspects of forest sciences with a focus on forest biometrics. For these purposes, we perform statistical and mathematical analyses and modelling of temporal, spatial and spatio-temporal data and develop new methods.

The publication list includes articles published within the NILS, THUF and FHIN programs.

The subject area Landscape studies conducts research on the various use of landscapes and its multiple resources aiming at an increased understanding of how socio-ecological processes, utilisation of natural resources and their organisation changes over time and at different spatial levels. Connections between natural resource use, stewardship, ecosystem production and community development processes, are of special interest. Our work builds upon competence in environmental monitoring, forestry consequence analysis, work science and rural development studies, complemented with studies of formal and informal institutions.

# Environmental Monitoring and Assessment

SLU is unique among Swedish universities with its strong focus on environmental monitoring and assessments (Foma). Within SLU, the Department is also quite unique with Foma as the dominating activity (roughly 60% of the budget). For a large set of terrestrial variables, Foma is the long-term monitoring and assessment of stocks and changes in stocks. Foma includes data capture, analysis and reporting. The inventories in the field, using remote sensing or by combining these two, are performed using area-based sampling designs adapted mainly to regional or larger scales. The idea is to carefully measure model variables on the sample units, and thus most of the uncertainty should arise from the fact that only a sample and not the entire population is measured. The uncertainty of estimates can be controlled by an efficient design and a large sample, and it is possible to estimate the accuracy of the estimates. Foma is an efficient way to monitor “how much” without disturbing the population, while an experimental design focuses on explaining “why” in a well defined manipulated area. Projections and scenarios about the future of terrestrial variables, often based on data from the monitoring programs, are also regarded as Foma.

## Swedish National Forest Inventory

SLU is the responsible authority for the official statistical area Forest Status and Change within the field of Agriculture, Forestry and Fisheries. Statistical products consist of area conditions, growing stock and tree biomass, annual growth, vegetation and habitat conditions and forest damage. The Swedish National Forest Inventory (NFI) operates within the Department to fulfil SLU’s statistical responsibility. Through an annual field survey of sample plots spread across the entire country, data are collected for compilation and presentation of official statistics. The results are published annually in the publication Skogsdata, which can be downloaded in pdf-format from our website, where the statistics also can be downloaded in multiple formats including APIs.

# National Inventory of Landscapes in Sweden

The National Inventory of Landscapes in Sweden (NILS), funded by the Swedish Environmental Protection Agency, aims to monitor the status and trends in biodiversity and landscape structures in all types of terrestrial environments. Field data are collected within 639 squares (1 km × 1 km each) using circular sample plots and line-intersect sampling.

## Terrestrial Habitat Monitoring

The EU Habitats Directive can be seen as the foundation of the European Union's nature conservation policy. The aim of the directive is to protect habitats and species of European community interest and it states that every member state shall undertake surveillance of the conservation status of habitats and species. As a response, the program Terrestrial Habitat Monitoring (THUF) was initiated in 2006 with the aim of developing efficient methods for the monitoring and assessment of terrestrial habitats of high conservation status as well as for organising necessary data collection, analysis and reporting.

## Butterfly and Bumblebee Inventory

The Butterfly and Bumblebee Inventory (FHIN) was established in 2006 as part of an assignment from the Swedish Board of Agriculture. The objective is to detect and report changes in the quality of meadows and pastures in Sweden. A sample of nearly 700 meadows and pastures in the vicinity of the sample plots used in NILS is visited over periods of 5 years.

## Forest Sustainability Analysis

The program Forest Sustainability Analysis (SHA) works with qualitative and quantitative analyses of the potential of forest ecosystems to provide various forms of ecosystem services in the long-term. Through the program, policy-makers, decision-makers and planners within a range of sectors in society, e.g. forestry, environment and energy, shall have access to expertise, analytical tools and support for decisions on issues related to forest development.

# Field Staff

Every year the Department organizes and implements extensive inventories of forests and landscapes in Sweden. To carry out this work a number of field workers are employed.
